Sprint 2 Requirements Documentation

Individuals Color-Coded:

- Chris/Ruben
- Wyatt
- Eden
- Forest
- Daniel

- [ ] 6: Hard Mode: Eden
  - [ ] When User finds a yellow letter within their guess, user must continuously use yellow letter within their further guesses
    - [ ] If User was to not use their previous letter in their next guess, refuse the user from entering their guess (errror message)
  - [ ] When User finds a Green letter within their guess, user must continuously use green letter in the same letter index position within their further guesses
    - [ ] If User was to not use their previous letter in the same index position their next guess, refuse the user from entering their guess (error message)
- [ ] 7: Easy Mode - Eden:
  - [ ] Create a Free Correct Letter Function Button:
    - [ ] In this function, User may click this button up to 5 times (max length of word list) to spit out the correct letter of the correct word
- [ ] 8: Forest Hint System:
  - [ ] Create a Hint Button
    - [ ] In this Hint Button, once clicked, the user will be provided with the correct definition (Meriam-Webster Dictionary) in relation to the correct word, without giving away the correct word:
      - [ ] Example - If the correct word is Adieu, and the user does not know that, but would like a hint, the user will click the hint button and will be provided with the definition of the correct

word: “an expression of good wishes when someone leaves : goodbye”

- [ ] User may also be given the synonym/antonym of the correct word (up for debate)

- [ ] 9: Testing/Quality Assurance: Daniel
  - [ ] Testing for any error cases in all specified functions within this requirement documentation
  - [ ] Uploading any fixes/comments/reports onto the testing branch based on discoveries
- [ ] 10: CSS/Styling/Presentation - Chris/Ruben
  - [ ] Making sure the basics of the grid, functions, buttons, are set up
  - [ ] Presentation for now can be basic, nothing advanced, when it comes to sprint 3 or 4, we can decide how advanced we want to make the presentation
- [ ] 11: Multi Player Mode: Wyatt
  - [ ] Player 1 versus Player 2
    - [ ] Implmenting a split screen adjustment, where both user 1 and user 2 can see each other’s previous guess, but not their current guess
    - [ ] Timer to encourage User 1 and User 2 to get in their guess in fast
    - [ ] Debate on Users entering guesses at time same time, or not (based off how timer will function)
    - [ ] Goal will be for one of the players to finish first, competitive

---

Sprint 1 Requirements Documentation

Individuals Color-Coded:

- Chris/Ruben
- Wyatt
- Eden
- Forest
- Daniel

- ☑ ~~1.1: HTML page, CSS file for the Wordle app: Chris/Ruben~~
- ☑ ~~1.2: Adding dictionary file for valid word guesses that a user can enter: Wyatt~~
